

Vishal Rajendra Dalve

Senior Software Development Engineer II – Distributed Systems & Platform Engineering  Pune, India
|  Open to Global / Remote Roles

 vishal.dalve@gmail.com |  +91-9595755108 |  [linkedin.com/in/vishal-dalve](https://www.linkedin.com/in/vishal-dalve)

EXECUTIVE PROFILE

Platform Architect & Backend Specialist with 10+ years of experience engineering high-throughput distributed systems for **15M+ global users**. Currently leading the **Payment Microservice at Transak**, orchestrating high-volume transaction lifecycles at a sustained **100+ requests per second (RPS)**. Expert in building **event-driven architectures**, optimizing **large-scale MongoDB** environments, and enforcing **observability-first** engineering cultures across regulated global markets.

TECHNICAL CORE

Category	Stack & Tools
Languages & Runtime	Node.js (Expert), TypeScript, JavaScript (ES6+), Express.js, Hapi.js
Architecture	Microservices, Event-Driven Design, Multi-tenant Systems, Idempotency, GraphQL
Cloud (AWS)	Lambda (Serverless), SQS, SNS, S3, EventBridge
Data Engineering	MongoDB (Advanced Aggregation/Indexing), PostgreSQL, Redis, RabbitMQ, Kafka
DevOps & Quality	Jenkins, GitLab CI/CD, Docker, SonarQube, Flagsmith (Feature Flags), PM2
Observability	New Relic (APM), Grafana, Prometheus, Sentry, Kibana, Mixpanel, PagerDuty
Security & Payments	JWT, OAuth2, Rate Limiting, Apple/Google Pay, Stripe, Plaid, Nuvei, Modulr
Blockchain	Ethereum, Hyperledger Fabric, Smart Contracts, Distributed Ledgers

PROFESSIONAL EXPERIENCE

Transak | **Senior Software Engineer – Platform / Payments Core | Bengaluru, India (2021 – Present)**

Impact: Owns the end-to-end Payment Microservice, stabilizing a crypto-fiat on/off-ramp ecosystem for 15M+ users through resilient distributed architecture.

- High-Throughput Performance:** Architected and scaled the Payment Microservice to handle a peak load of **100+ RPS**, maintaining high availability and consistent P99 latencies during high-volatility market events.
- Distributed Architecture:** Engineered an event-driven webhook processor using **AWS SQS & Lambda**, implementing complex retry strategies and **DLQ isolation** to handle millions of transaction events with zero data loss.

- **Financial Reliability:** Designed and enforced **idempotency key logic** to prevent duplicate executions; implemented automated fallback mechanisms for 3rd-party provider outages.
- **High-Scale MongoDB Engineering:** Architected schemas for billions of records; optimized query performance via **compound/partial indexing** and TTL indexes, significantly reducing CPU/Memory overhead.
- **Observability & MTTR Reduction:** Built comprehensive **Grafana dashboards** and integrated **New Relic APM** for P95/P99 latency analysis, reducing Mean Time to Resolution (MTTR) via centralized transaction correlation.
- **Engineering Excellence:** Integrated **SonarQube** into Jenkins pipelines for automated quality gating; mentored junior engineers on asynchronous processing and fault-tolerant design.

Tata Technologies | Solutions Developer / Pune, India (2020 – 2021)

- Developed scalable enterprise backend services, focusing on system modularity and API performance.
- Designed and deployed enterprise-grade APIs for clients like Jaguar Land Rover and Cummins.

Vinove Software & Services | Senior Blockchain Engineer / Gurugram, India (2019 – 2020)

- Developed private blockchain-based fintech applications using Ethereum smart contracts.
- Architected BTC Transactor, automating secure Bitcoin transfers via Node.js microservices.
- Built tokenized asset management and decentralized real estate solutions.

Saaragh Technologies | Blockchain / Node.js Developer / Hyderabad, India (2018)

- Developed APIs for Hyperledger Fabric-based healthcare management system (HealthLedger).

WebsVento Infotech | Android / Node.js Developer / Noida, India (2016 – 2018)

- Built Android and backend applications for B2B and B2C clients.

LEADERSHIP & SYSTEM STRATEGY

- **Requirement Solutioning:** Lead POCs to validate 3rd-party payment integrations, assessing risk and system fitment before production rollout.
- **Migration Strategy:** Led the transition from heavy synchronous processes to **asynchronous compute**, drastically improving API response times and reducing Lambda cold-start latency.
- **Cultural Impact:** Strengthened the engineering culture by mandating **Feature Flag-based deployments** (Flagsmith), allowing for 0-downtime, gradual rollouts of mission-critical features. Mentored 2+ backend engineers, conducting code reviews and technical sessions. Recognized for delivering robust, secure, and high-performance backend systems

EDUCATION

- **Master of Computer Applications (MCA)** | Sinhgad Institute of Management, Pune, India (2012–2015)
 - **Bachelor of Computer Science (BCS)** | Swami Ramanad tirth University, Nanded, India (2010–2012)
-
